

ABSTRACT

ONLINE PHARMACY SHOP

“**ONLINE PHARMACY SHOP**” is online website or webstore for easy accessing and purchasing of medicinal products that are required by the user. The website helps the users to view, purchase from their current locations or without visiting a store. It helps in providing best services to the users.

USERS

- Admin
- End user

FUNCTIONALITIES

In this project each users have their own functionalities on which each will help the users to reduce their work and improve the efficiency. The functionalities described here are:

Admin

- Login/Register
- Admin profile
- Access to information regarding customers
- Access to information regarding Shop owner / Suppliers
- Payment details
- Add/remove products
- Product description
- Logout

End user/ Customers

- Login/register
Users who is not registered can only see/use website homepage
- Edit Customer profile
- View products
- Read product description
- Add products into cart
- Purchase products
- Choose no of quantities
- Logout

EXISTING SYSTEM & NATURAL SYSTEM

The natural system requires the user to directly visit or reach the store for the purchase and service while on an existing system the users can purchase the products via online but for the services.

Disadvantages of Existing System:

- Poor reliability
- Cost Consumption
- Cannot request for unavailable items

DESIGNED SYSTEM

The proposed system has been designed to overcome all the drawbacks found in the existing or a natural system. The proposed system has enhanced features, which was not found in the existing system.

Advantages of Proposed System:

- Faster delivery of products
- Cost Consumption
- End-Users can request for unavailable products
- Automatic delivery

TECHNOLOGIES USED

- HTML (front-end)
- Php,mysql (back-end)

WEEKLY PLAN

Building website front end, Login pages, Databases, Backend Coding and adding functionalities in each week
